Title: Disposable diaper

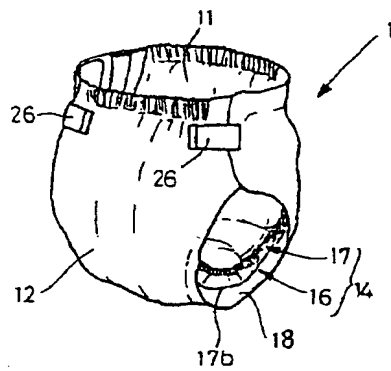

Claims:

1. A disposable diaper comprising at least a water pervious top sheet, a water impervious back sheet, an absorbent interposed between both of the sheets, a pair of right and left first side flaps extended outwardly from opposed lateral side edges of the absorbent and a pair of right and left secured side flaps extended longitudinally on the upper surface of the diaper at the periphery of the side edges of the absorbent, one side edge of the second side flap is a secured end bonded to the upper surface of the diaper and the opposite side edge is a shrinkable free end at least partially having an elastic member, wherein

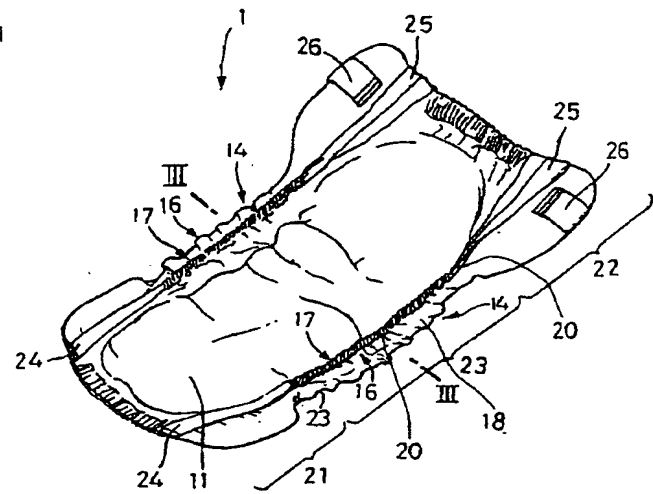

the second side flap comprises a spun bond non-woven fabric situated on the inner side thereof and a melt blown

non-woven fabric of extremely fine fibers to be in contact with the skin of a wearer, and the non-woven fabrics are bonded with each other intermittently.
